This is the first office action for application number 09/776,355, Arm Apparatus for Mounting Electronic Devices with Cable Management System, filed on February 2, 2001. This application is a continuation-in-part of application number 09/406,006 filed September 24, 1999.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-32 and 34-35, drawn to an adjustable extension arm, classified in class 248, subclass 278.1.
- II. Claims 36-41, drawn to tilter assembly, classified in class 248, subclass 274.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the adjustable extension arm in claims 1-32 and 34-35 is uses various joints for adjusting the an electronic device placed on a vertical surface, the adjustment is a result of pivoting and rotational movement of the extension arm. The tilter assembly cited in claims 36-41 uses swivel adjustment to adjust a support platform for a planar support such as a tray for supporting various types of objects. The adjustment limitations of claims 36-41 greatly vary from the adjustable

limitations of the remaining claims and thus, to search both inventions would result in a burdensome search.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
